Online Training Programme on

“Development of Entrepreneurial skills in Tissue Culture and Molecular Techniques”

Training with birds-eye-view

Since commencement of green revolution in India, attempts are being made to improve the productivity through classical breeding, mutation breeding and through land and water resources management. However, production of many crops is fast approaching a plateau. This is because there are limitations intrinsic to the plant genome and its interaction with the environment. Fortunately, we face this problem at a time when new science of Biotechnology is blooming in our laboratories.

The tools and techniques in biotechnology have given the impetus for development of crops at molecular levels. Thus there is urgent need to refresh and revisit our knowledge in tissue culture and molecular technologies. On this pretext the 30 days comprehensive training has been articulated to acquaint the students to sophisticated techniques and procedures which will be delivered by faculty of eminence across the India. The aim of the training is to develop skillful workforce in the field of biotechnology and prepare the mindset of budding students to transform into self-calibrated entrepreneur of 21st century. The training will allow the participants to revisit and reprise the skills assimilated in the current past and reveal them the might of the novel techniques for prosperity of the farmer and nation in the immediate future. Thus all wishful participants are requested to register for the online training to cherish the dream of future development.
